Beginner's Development Cycle

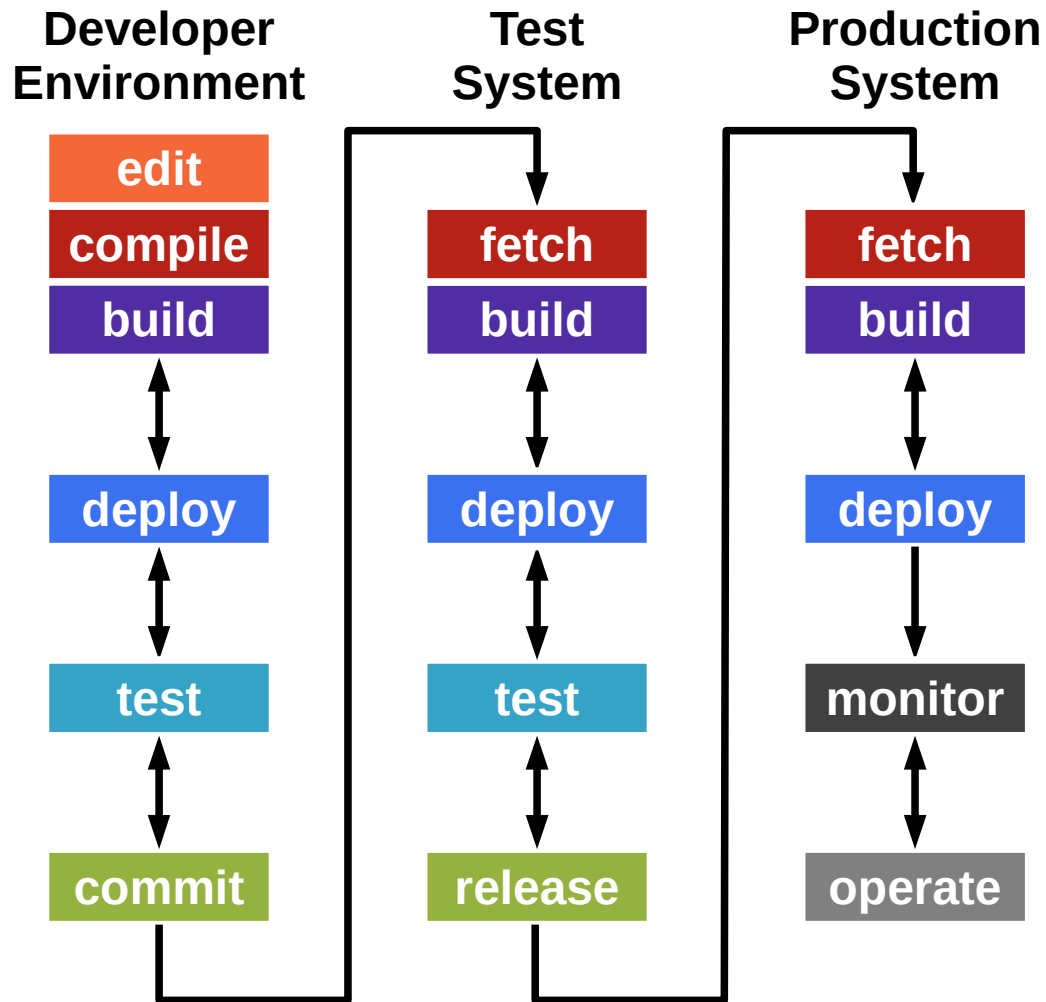

- **Developer**
 - **Edit:** Implements new feature
 - Iterates over the code until it looks right
 - **Compile:** Compiles the code
 - Iterates over the code until it compiles (no syntax error)
 - **Build:** Puts classes, build path together
 - Packages jar, if any, by hand
 - **Test:** Tests the program
 - Keeps going until “behavior looks right” i.e. no bugs
 - **Deploy:** Puts code into production
 - If a student, submits homework

Practitioner's Development Cycle

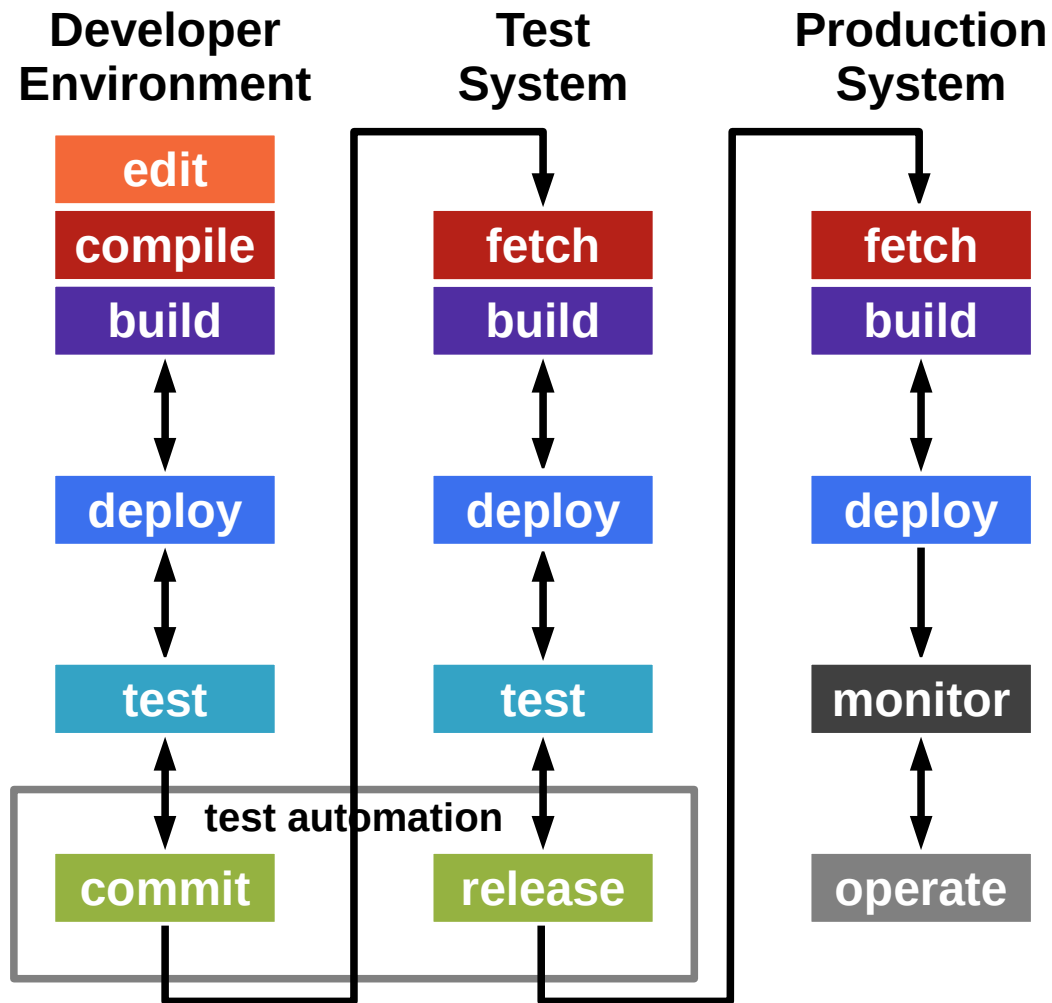

- Developer
 - Finishes development work
 - Uses local edit-compile-test cycle
 - Commits to indicate finishing
 - Builds for production environment
 - Could possibly use local build
 - Deploys to production system

Professional Development Cycle

- QA engineer
 - Fetches code
 - Builds full system
 - Deploys in test system
 - Tests full system
 - Automated and by-hand
 - Component tests
 - Acceptance
 - Integration tests
 - Deploys full system
 - Operates system

Continuous Integration Development Cycle

- Release (QA) engineer
 - Fetches code
 - Builds full system
 - Deploys in test system
 - Tests full system
 - Automated and by-hand
 - Component tests
 - Acceptance
 - Integration tests
 - Deploys full system
 - Operates system

Test Automation

- Test automation ...
 - automatically carries out all available tests
 - Component tests (unit tests)
 - Acceptance tests (functional tests)
 - Integration tests and system tests
 - provides feedback to development and QA

Continuous Integration

- Continuous integration (CI) is a code integration process
 - Upon trigger (commit to official repository)
 - the system under construction is fetched, built, deployed, and tested
 - in a fully automated way (no human intervention)
 - Feedback upon system status is provided to both
 - developers and
 - managers
- The purpose of continuous integration is to
 - always know where you are standing with respect to the project
 - ideally improve quality such that you can deploy at any time
- Continuous integration requires test-driven development

Continuous Integration and Lava Lamps

In the early days, lava lamps were used to signal whether the project could be deployed to production or not.

Continuous Integration Dashboards

Continuous integration quickly evolved to build and test status dashboards hung on office walls for everyone to see.

Example Dashboard Build #437

[Jenkins](#) » [fsahoy](#) » [#437](#)

ENABLE AUTO REFRESH

[Back to Project](#)
[Status](#)
[Changes](#)
[Console Output \[raw\]](#)
[View Build Information](#)
[Polling Log](#)
[Test Result](#)
[See Fingerprints](#)
[Previous Build](#)
[Next Build](#)

**Build #437 (Jul 27, 2011 12:40:18 PM)**
Started 6 mo 28 days ago
Took [1 min 7 sec](#)

**Changes**
1. version bump to 1.1-SNAPSHOT, added ignored UpdateLogbook selenium test ([detail](#) / [hgwweb](#))

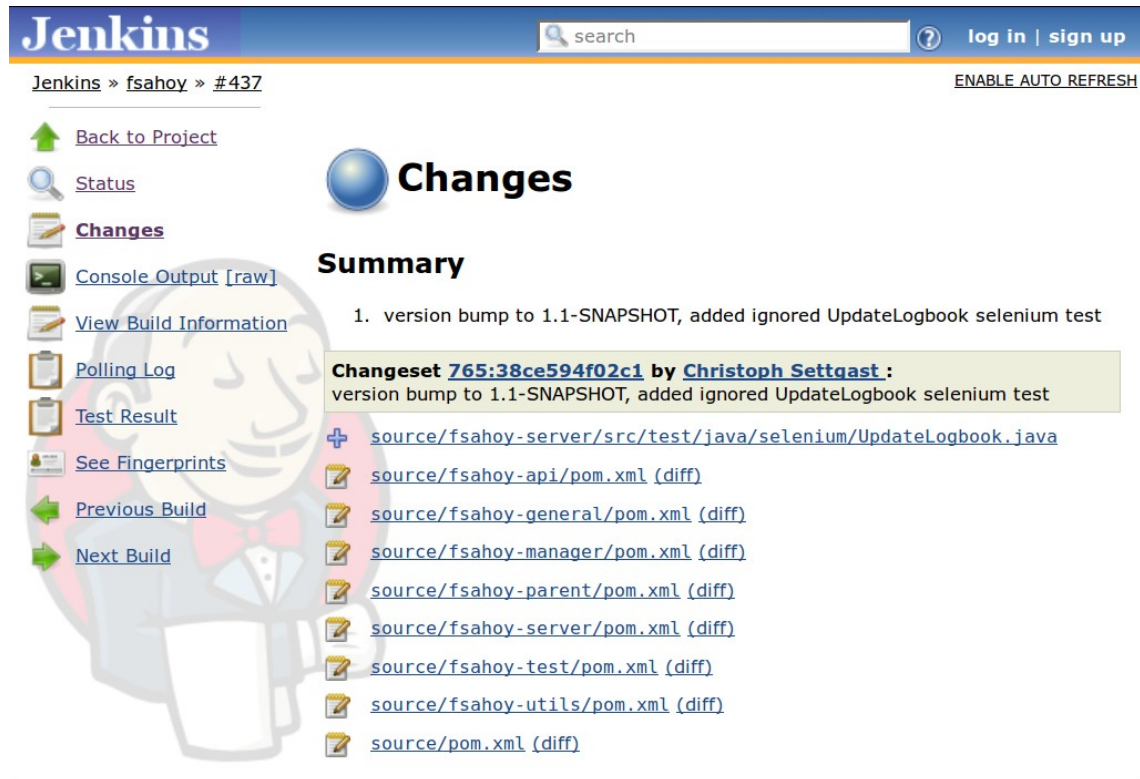

**Started by an SCM change**

**[Test Result](#) (no failures)**

Module Builds

FreeSeasAhoy Project	0.94 sec
FreeSeasAhoy Api	5.4 sec
FreeSeasAhoy General	3.8 sec
fsahoy-main (didn't run)	
FreeSeasAhoy Manager	1.3 sec
FreeSeasAhoy MetaProject	0.11 sec
FreeSeasAhoy Test Fixtures	1.2 sec
FreeSeasAhoy Utilities	3.3 sec

Example Dashboard Changes #437

A screenshot of the Jenkins web interface showing the 'Changes' page for build #437 of the 'fsahoy' project. The page has a blue header with the Jenkins logo, a search bar, and links for 'log in' and 'sign up'. Below the header, the breadcrumb 'Jenkins » fsahoy » #437' is visible, along with an 'ENABLE AUTO REFRESH' button. A left sidebar contains navigation links: 'Back to Project', 'Status', 'Changes' (highlighted), 'Console Output [raw]', 'View Build Information', 'Polling Log', 'Test Result', 'See Fingerprints', 'Previous Build', and 'Next Build'. The main content area is titled 'Changes' with a blue sphere icon. Under the 'Summary' section, it lists '1. version bump to 1.1-SNAPSHOT, added ignored UpdateLogbook selenium test'. A yellow box highlights the 'Changeset 765:38ce594f02c1 by Christoph Settgaest' with the description 'version bump to 1.1-SNAPSHOT, added ignored UpdateLogbook selenium test'. Below this, a list of files with diff links is shown, including 'source/fsahoy-server/src/test/java/selenium/UpdateLogbook.java' and several 'pom.xml' files in the 'source' directory. A faint cartoon character is visible in the background of the main content area.

Jenkins

search log in | sign up

Example Dashboard Test Results #437

Jenkins [log in](#) | [sign up](#)

Jenkins » fsahoy » #437 » Test Result [ENABLE AUTO REFRESH](#)

[Back to Project](#)
[Status](#)
[Changes](#)
[Console Output \[raw\]](#)
[View Build Information](#)
[Polling Log](#)
[Test Result](#)
[See Fingerprints](#)
[Previous Build](#)
[Next Build](#)

Test Result

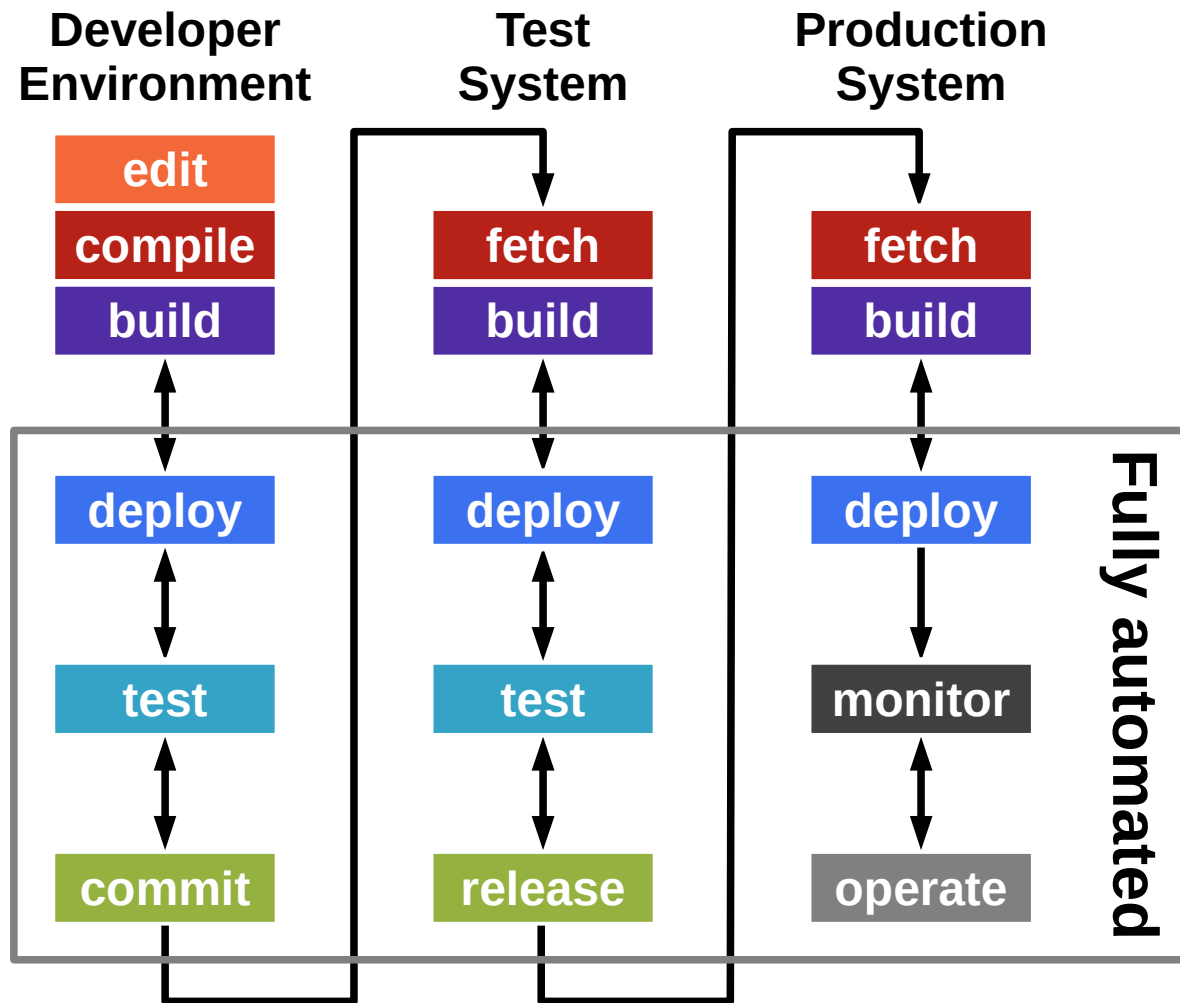

0 failures (±0) , 3 skipped (±0)

107 tests (±0)

Module	Fail	(diff)	Total	(diff)
de.fau.cs.fsahoy:fsahoy-api	0		2	
de.fau.cs.fsahoy:fsahoy-general	0		71	
de.fau.cs.fsahoy:fsahoy-server	0		20	
de.fau.cs.fsahoy:fsahoy-utils	0		14	

Page generated: Feb 20, 2012 2:15:28 PM [Jenkins ver. 1.417](#)

Continuous Deployment Development Cycle

- Fully automated
 - Compile and build
 - Deployment
 - To test environment
 - To production
 - Test execution
- Partially automated
 - System monitoring
 - Automated rollback
- Human decisions
 - Commit decision
- No release decision

Continuous Delivery

- Continuous delivery is a delivery process
 - Upon trigger (commit to official repository)
 - the system is integrated, tested, and **deployed to production**
 - in a fully automated way (no human intervention)
 - A poorly functioning system may be rolled back
 - Requires monitoring and rollback facility of deployed system
 - System status is assessed using key figures
- The purpose of continuous delivery is to
 - put development results into production as fast as possible
 - improve quality by holding the team to high operational standards

- 1. Test automation**
- 2. Continuous integration**
- 3. Continuous deployment [1]**

[1] Short for “development operations”

Continuous Delivery 2 / 2

- Test automation =
 - Tests and testing
- Continuous integration =
 - Test-driven development +
 - Automated building +
 - Test automation
- Continuous deployment =
 - Continuous integration +
 - Deploy to production +
 - Monitoring and rollback
- DevOps
 - Continuous deployment +
 - Operations and culture

Review / Summary of Session

- Continuous delivery
 - Test automation
 - Continuous integration
 - Continuous deployment
 - Development operations
